

KAUSHALENDRA SINGH

AI Engineer - Agentic Systems · MCP · RAG/Retrieval · Python & Node Backends

+91 6398519072 | yadavkausha4a5@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EXPERIENCE

AI Founding Engineer Intern - [EpicWise](#)

Remote (Canada startup)

May 2026 – Present

- Building the core **context engine** (multi-step **LangGraph** pipelines, execution routers, tool-calling schemas) that lets EpicWise's AI agents answer from real organizational context instead of guessing - the reliability layer the product's accuracy depends on.
- Built EpicWise's public **MCP server** (auth, authorization, agent-harness testing agent, requirement-analysis agent), turning EpicWise into a system other AI tools (Cursor, Claude, custom agents) can securely connect to - a new integration surface for the product.
- Built hybrid retrieval combining vector search (**Pinecone**) and graph-based retrieval (**Neo4j**) so agents pull the right organizational context instead of loosely-related matches, directly reducing wrong or made-up answers.
- Built tracing/observability tooling with **Langfuse** and structured logging so the team can catch agent failures before customers do - critical for a pre-scale startup shipping to real users.

Full Stack Developer Intern - [GRS Worker](#)

Remote

Sep 2025 – Nov 2025

- Built the backend (Node.js, Prisma, PostgreSQL, Redis) powering a live worker-management product used to schedule and track real gig workers - the system a real business runs its day-to-day operations on.
- Reduced data errors by **40%** using Zod validation and structured service-layer workflows, directly cutting failed submissions and the support load that comes with them.
- Integrated Twilio + QR check-in flows for faster on-site worker verification; containerized and deployed all services with **Docker** and CI/CD so releases could ship safely without downtime.

PROJECTS - AI / AGENTIC SYSTEMS

Evident - Agent-Agnostic Extraction Engine [GitHub](#) | [Live](#)

Python, FastAPI, MCP, Crawl4AI

- Converts any URL into structured, **typed data with confidence scoring**, exposed via MCP, REST, and a Python SDK - replaces manual copy-paste data collection with a pipeline any agent can call and trust.
- Confidence scoring lets downstream AI agents know when to trust extracted data vs. flag it for a human - the same reliability problem as pulling verified facts out of unstructured legal documents.

Buildify Labs - Agentic AI Business Intelligence [GitHub](#) | [Live](#)

Next.js, FastAPI, PostgreSQL, LangGraph, Groq, Pinecone

- Agentic platform using **LangGraph (ReAct pattern)** to convert natural language into SQL and dashboards - lets non-technical business users get answers from their own data without waiting on a data analyst.
- Implemented **short-term + long-term memory** with session state and context-window management so users can ask multi-step, follow-up questions instead of restarting each query from scratch.

RepoGraph AI - VS Code Extension [GitHub](#) | [Live](#)

TypeScript, VS Code API, Groq, Ollama, Gemini, Anthropic, OpenAI

- Maps every file relationship in a workspace into an interactive dependency graph so engineers can understand an unfamiliar codebase in minutes instead of days; integrates **5 AI providers** with a multi-turn Q&A agent grounded in full graph + file context.
- Free, open-source, zero-telemetry, bring-your-own-API-key - **40+ installs** on the VS Code Marketplace since launch.

OPEN SOURCE

Joplin (54K+ GitHub Stars) [Contributions](#)

- Opened 7 PRs against Desktop, mobile, and the sync engine (React, Electron, Node.js); **2 merged**, incl. a desktop renderer crash fix and a OneNote import bug fix - reliability fixes shipped to Joplin's real user base after review by upstream maintainers on a **54K+ star** codebase.

TECHNICAL SKILLS

- **AI / LLM:** LangChain, LangGraph, ReAct & Plan-Execute agents, MCP (server + client), RAG, Transformers, Fine-tuning, Pinecone, FAISS, Neo4j, Langfuse, LangSmith, Claude Code, OpenAI/Gemini/Anthropic/Groq APIs
- **Backend:** Python, FastAPI, Node.js, Express, Prisma, REST/GraphQL, Redis, PostgreSQL, MongoDB
- **Frontend:** TypeScript/JavaScript, Next.js, React, Tailwind, Zustand
- **DevOps:** Docker, Kubernetes, AWS, CI/CD, structured logging & observability

EDUCATION

Harcourt Butler Technical University, Kanpur - B.Tech

2023 – 2027
